Our Special Offer
To You

Incorrect weather during the month of January has doubtless caused many to post¬
pone their pecan tree planting. To encourage business and double our sales for February
over any previous February, we are offering for the remainder of the season a very unusual
proposition, a special FIFTEEN PER CENT DISCOUNT on our regular prices. This is by
far the most attractive offer we have ever made and one that you can not afford to pass up,
if at all possible to make your planting this season.

Our Pecan Trees Have The Best
Lateral or Side Root
System Grown

Remember the root system to the trees you set is the foundation of your Pecan Grove. 90 to 100
per cent of our Pecan Trees should live and grow when given reasonable care.

This offer applies only on our regular prices which are printed on the other side and on orders
placed during the remainder of this season only.

YOUR ORDERS WILL BE FILLED WITH ONLY FIRST CLASS WELL ROOTED TREES
Positively no trees will be shipped that are not first-class and up to our high standard.

WE HAVE THE PECAN TREES YOU NEED

Start That Pecan Grove Now

Pecan Trees can be successfully transplanted until March 10 to 15, but the sooner the better.
Don't lose another year. They can never grow one inch for you until you give them a chance.
So mail your order TODAY.
"AMONG all the money-making-possibilities in the South, pecan growing ranks first. There is no other enterprise you can follow with such great profit and safety," said R. C. Berckmans, International authority on horticulture and nut growing.

Far sighted people are investing in pecan orchards because their investigation proves that the bearing pecan orchard is profitable, not for a few years only, but permanently.

The table below shows an estimate of the probable yield of an acre orchard. The figures are not guaranteed, but are, to the best of our knowledge and belief, accurate and authentic.

</table>

Remembering that at twenty years the pecan orchard is merely entering on its most productive period—that the average annual yield of a tree during the second twenty years is estimated to be four times as great as the yearly average during the entire bearing period preceding the twentieth year, you realize why Mr. Berckmans said, "You can leave no better inheritance to your family than a pecan grove. Whoever plants pecans, plants not for himself alone, but for his children and his children's children for generations to come.

The above statement and figures were not compiled by us, but by a reputable Pecan Company that's located in Georgia and who has 5,000 acres set to a Pecan Grove. We understand that this company got reports from a large number of groves and averaged them which gave the above figures.

We believe these figures are correct as they were compiled, but if you develop a grove that produces one-half of this amount wouldn't it be fine? To be very conservative if you only produce 25 per cent of this amount and had a grove that was established forever and getting better every year, could you beat it? Pecan growing is the best and safest investment that you or any one else can make.

Read Here What Our Trees Are Doing for Others—They Will Do As Much for You

Remember our Trees Have all Been Budded or Crafted With Wood from Bearing Trees
EASTERN VARIETIES

STUART

The Stuart comes nearer being suited to all sections of the country and all soils than any other variety. A large nut, fills well, medium to heavy bearer. A hardy, fast growing tree. One of the earliest ripening of all large standard pecans. 48 per cent meat.

MONEY MAKER

Originated in Madison Parish, La. Widely disseminated. Size, medium; kernel, fairly plump; quality, fair; flavor, sweet. Very prolific. Especially suited to planting in the northern range of the area adapted to Southern varieties.

DELMAS

A very vigorous growing tree and heavy bearer, with splendid foliage, large nuts. 40 to 50 will make a pound. 55 per cent meat.

SCHLEY

This is an ideal Pecan. Large size, very thin shell, fills and shells out well; fine flavor. Rapid growing tree. Beautiful foliage, and the nuts sell for 10c to 20c more per pound than other varieties, but not quite so prolific as some of the other varieties. 60 per cent meat.

MOORE

A very fast growing tree. Medium size nuts, thin shells, good flavor, very productive, and one of the earliest to mature. About 56 per cent meat.

SUCCESS

A large and strictly first-class Pecan. Strong growing tree, early bearer, thin shell, cracks well, and the meats can be taken out in halves. Ripens almost ten days later than the Stuart, and is gaining prominence fast. 57 per cent meat.

WESTERN VARIETIES

SPECIAL PRICED TREES

BURKETT

Originated by J. H. Burkett at Clyde, Texas; one of the best varieties for West Texas. People in that section are setting more of the Burkett than of any other variety. Medium size, fills well, good flavor and prolific. 60 per cent meat.

OKLAHOMA

Mother tree, Ardmore, Okla. Large nut with shape much like the Stuart. Thin shell. About 40 to the pound. A heavy producer. The tree is rugged, with drooping or willowy branches. Matures rather late. We believe this will make a good variety for Texas also.

TEXAS PROLIFIC

This variety is a large size nut, shell of medium thickness, with kernel plump, rich and sweet. It is a heavy producer and we believe should be planted extensively in West Texas. It is showing up well on a small scale in East Texas. The Texas Prolific will not disappoint you.

HALBERT

Young trees inclined to be crooked, but get straighter as the trees grow older. Very early and prolific bearer. Medium size nuts, very thin shell, excellent flavor. A good tree for black waxy land. Should not be set in Mississippi, Louisiana, East Texas or East Oklahoma. 57 per cent meat.
Let us tell you how—

Would you like to own one like this?

A large Smith County pecan grove.

That live and grow

pecan trees

Pocorson, Pocorson, Pocorson.
